## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent; or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for the purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English.

2. Claims 1-2 are rejected under 35 U.S.C. 102(e) as being anticipated by Mercier, US 6,865,747.

Re claim 1, Mercier discloses a method of pausing an MPEG coded video stream including a series of groups of pictures, each group of pictures (GOP) including an I frame and a plurality of B or P frames (col. 9, line 65 – col. 10, line 55; Note: GOPs are inherent in MPEG-see fig. 3B), said method comprising selecting an I frame from the MPEG coded video stream; constructing a pause GOP from the selected I frame, the pause GOP including an I frame, freeze frames, and padding; making a seamless transition from the MPEG coded video stream to the pause GOP; and playing the pause GOP a plurality of times in succession. (See col. 2, line 61-64, col. 7, line 7-52, col. 9, line 65 – col. 10, line 55; Note: the cited segments disclose an I-frame establishing a pause stream i.e. pause GOP, the P or B “empty” frames inserted to form the pause stream qualifies as “freeze” frames because they contain data for repeating the content

of the reference frames i.e. playing the pause stream repeatedly, and transition between normal play and trick play modes is seamless).

Re claim 2, the method as claimed in claim 1, which includes selecting a number of frames to include in the pause GOP to obtain a desired constant frame rate when the pause GOP is played a plurality of times in succession. (See col. 10, line 44-50. In this segment, "empty" B frames are inserted accordingly to adjust playback speed and control the bitrate. Hence, maintaining constant frame rate is within this capability).

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mercier '747.

*This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).*

Re claim 4, with respect to the rejection of claim 1, although not disclosed in Mercier the further limitations of "wherein the pause GOP is played a plurality of times in succession until a resume is requested, and when a resume is requested, a seamless transition is made to playing of the MPEG coded video stream beginning with the I frame selected from the MPEG coded video stream", resuming normal play by seamlessly transitioning out of the trick play i.e. pause mode to normal play mode would have been obvious and necessitated in Mercier. This concept is notoriously well known for the benefit of simulating VCR-like operations. Official Notice is taken.

***Allowable Subject Matter***

5. Claims 3, 5-19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
6. Claims 20-30 are allowed.
